

NO ONE ELSE CAN MAKE THIS STATEMENT

No one in business today is immune to the growing ransomware epidemic, now a trillion dollar global problem, affecting 42% of small and mid-sized businesses just in the last 12 months. A business is attacked with ransomware every 40 seconds.

NO BUSINESS OR INDUSTRY IS EXEMPT

The recent and infamous Wannacry attack hit hospitals, companies, universities and governments across over 150 countries, and affected over 200,000 victims. Small and medium size companies without access to a sophisticated cybersecurity infrastructure are often suffer the most.

While the initial impact may be considerable, the long-term effects of an attack are even more costly - not just financially, but in downtime, data loss, brand and reputation damage and even the safety of an organization.

INTRODUCING BLOCK RANSOMWARE™

The solution is Block Ransomware anti-encryption system. It is the only internet

BLOCK
ransomware

security solution which can prevent the locking or encryption of your valuable computer data, by holding it ransom.

Block Ransomware is a patent-pending, proprietary system of hardware and software that goes a step beyond those conventional programs that depend on identifying and *then* addressing known problems. Block Ransomware can *prevent even unknown* problems.
